PROJECTS

Blockchain-Based Voting System	Solidity • Ethereum • Node • React • Ethers.js
- Developed a decentralized voting system using React, Solidity, Ethereum, and Ethers.js, enabling secure voter authentication, vote casting, and tamper-resistant election results through smart contracts. - Implemented a Layer 2 batch processing mechanism to validate votes off-chain before committing them to the Ethereum mainnet, improving scalability, reducing transaction costs, and ensuring immutable vote records.	
ServiceHub — Full Stack Service Marketplace	React • Node.js • Express.js • MongoDB
- Built a scalable MERN-based service marketplace using React, Node.js, Express.js, and MongoDB with RESTful APIs, JWT authentication, RBAC, booking management, provider scheduling, reviews, and real-time chat using Socket.io. - Integrated Razorpay payments, OTP-based authentication, email services, and Docker containerization using Docker Compose for secure, streamlined development and deployment.
